Mahi Jain

Full Stack Developer | Bangalore, India
mahijaincodes@gmail.com | +91 9303400428 | LinkedIn | GitHub | Portfolio | LeetCode

Summary

Full Stack Developer at two product startups (Acowale, Qureal AI), working across React/Next.js, Node.js/NestJS and PostgreSQL. Built a company-wide design system, a passkey-based identity platform, multi-tenant ERP backend modules and AI billing and studio products, plus full stack projects including an AI health PWA and a job-automation platform.

Experience

SDE-2 Present
Acowale – multi-tenant ERP and accounting platform *Bangalore, India*

Design system (`@acowale/ads`)

- Built Acowale's design system from an empty repo into a **typed, versioned npm package** published through CI on GitHub Packages, with **61+ components** and **140+ Storybook stories** used by every Acowale app.
- Designed a **runtime theming engine with 7 independent axes** (style, mode, base color, 17 brand hues, 17 chart palettes, radius, 26 fonts) using CSS cascade layers and root attributes; **zero theme-specific code** in components.
- Architected a **data-grid engine** on TanStack Table and TanStack Virtual (designed for 10,000+ rows); one headless core powers **∼16 ERP tables** with spreadsheet-style keyboard editing, range selection and Excel-style copy.

Identity and frontend platform

- Drove the move to a **centralized SSO identity model** (Acowale Passport, OAuth-style code exchange) and built the auth app: email-OTP signup, password and **passkey (WebAuthn)** login, device management and recovery.
- Designed **httpOnly cookie sessions** with a **single-flight token refresh** shared across concurrent requests; hardened every auth path against open redirects and account enumeration.
- Set up the frontend architecture (React 19, TanStack Router and Query, Zustand) and **∼280 tests** in Vitest, RTL and MSW.

Backend (NestJS, Fastify, PostgreSQL, Kysely, Redis)

- Worked on a **multi-tenant accounting backend** (∼229 endpoints, 70 tables): double-entry balance enforced by a **deferred Postgres constraint trigger**, an `ltree` chart of accounts with per-tenant overrides, and row locks on payments.
- Worked on **RBAC with per-user overrides cached in Redis**, multi-device sessions with revocation, and request-scoped settings via `AsyncLocalStorage`.
- Audited the API and reported prioritized fixes: open routes, SQL injection, an unverified webhook, unenforced RBAC.

Full Stack Developer Feb 2025 – Jul 2025
Qureal AI – AI content and marketing platform

- Built the complete **Billing & Subscription** flow end to end (plan comparison, upgrade/downgrade/pause/cancel, real-time coupon validation, pricing preview) on **Razorpay**, including webhook handlers for async payment events.
- Built the **AI Image Studio** (multi-attribute configurator with real-time AI image generation across two modes) and a multi-channel **Social Media Scheduler** with a draft → approve → publish workflow and AI captions.
- Moved image editing (crop, rotate, brightness, contrast, resize) to the client, **cutting backend load 30%**, 2s faster per image.
- Built **15+ reusable React components** (UI dev time −20%) and production REST APIs in Node.js, Express and JWT.

Frontend Developer Intern Apr 2023 – Jun 2023
YouEkko Communication

- Built 10+ reusable components and SEO-optimized Next.js pages (Lighthouse 85+), auth flows and PDF/PNG/SVG export.

Projects

ParentCare – AI Health Accountability Platform | *Next.js 16, React 19, TypeScript, Tailwind v4, Supabase, PWA* Live | GitHub

- Built a mobile-first, **installable PWA** for non-technical elderly parents: two route groups (kid/parent) with shared layouts, **15+ screens** and sub-second navigation via App Router Server Components.
- Engineered an interactive **exercise coach** with step progression, segmented progress bar, rest countdown and rep adjustment.
- Added **voice narration** (Web Speech API, English/Hindi) with a fully typed i18n system, **Web Push** (VAPID + service worker), and client-side image compression before Supabase Storage upload.

JobPilot – Automated Job Application Platform | *React, Node.js, Playwright, OpenRouter* Live | GitHub

- Built an automated job-application platform with **Playwright** and a **browser extension** for one-click submissions, backed by a GitHub Actions-synced real-time database.
- Integrated OpenRouter with engineered prompts for **LLM-agnostic tailored answers**, cutting manual effort by 90%.

InsightHire – Community Interview-Prep Platform | *MERN, Cloudinary* Live

- Role-based views for public sharing and private tracking of interview experiences; media uploads via Cloudinary and Multer.

Technical Skills

Frontend: React 19, Next.js, TypeScript, Tailwind CSS v4, TanStack (Table, Query, Router), Zustand, Zod, shadcn/ui, Storybook
Backend: Node.js, NestJS, Express, Fastify, REST, JWT, PostgreSQL, Kysely, Redis, Supabase
Testing & Platform: Vitest, RTL, MSW, Playwright; WebAuthn, Web Push, Service Workers, PWA, i18n
AI & Tools: LLM integration, MCP, prompt engineering; Git, GitHub Actions, CI/CD, Vercel, Firebase, Postman

Education

B.Tech, Swami Vivekanand University, Sagar, Madhya Pradesh 2021 – 2025
